WASHINGTON 25 D. C.

PREFACE

The Current List of Medical Literature is a monthly publication of the Armed Forces Medical Library. Each regular number consists of three parts: a Register of Articles, a Subject Index, and an Author Index. The last (June or December) number of each semi-annual volume is a cumulation of the Author and Subject Indexes of the preceding five numbers.

Selection of Articles. Journals selected for inclusion in the Current List are derived from among about 5,000 current titles received in the Armed Forces Medical Library from all parts of the world. The chosen titles represent clinical and experimental medicine and the ancillary biomedical fields. In the belief that some of the allied fields, such as dentistry, veterinary medicine and chemistry, are adequately covered by existing bibliographical services, the Current List restricts its coverage in these areas to selected major publications. The Current List indexes all original articles with no attempt at a critical selection. Occasionally, however, articles are not indexed if they fall beyond the scope of the Armed Forces Medical Library; such omissions are indicated by an asterisk preceding the reference line of the journal issue.

Register of Articles. The Register is arranged alphabetically by journal title, the articles listed and numbered according to their appearance in the journal itself. The numbering of articles is begun anew with each volume of the Current List and continues through the five Registers of that volume. The full title of each journal appears in upper case as a caption. Directly under the title caption appears a reference line, which consists of the title abbreviation, volume and issue number, and the date of the publication of the particular journal piece. Both volume and issue numbers are given in arabic numerals, 23(2), for example, indicating Volume 23, Number 2. Each Register entry contains the authors, title and pagination of the article, foreign language titles being given in the original language and followed by an English translation.

Subject Index. The alphabetical Subject Index provides three levels of subject breakdown: a main heading, a subheading, and a sub-subheading, called the "modification". Main headings are those which appear in the Subject Heading Authority List used by the Current List Division (now the Index Division), Armed Forces Medical Library.* Subheadings are standard words or phrases representing concepts of frequent occurrence in biomedical literature and useful for purposes of subgrouping. The modification is derived from the article itself, and attempts to give within its limits an indication of the specific substance of the article. Each Subject Index entry contains a number which relates it to a Register entry.

Author Index. Every author credited by an article is listed in the Author Index by surname and initials, related to a Register entry by a number. Articles about an individual including obituaries, are listed in the Subject Index under the headings BIOGRAPHIES and OBITUARIES, with the name of the individual as the modification.

Subject Headings. In general the words or phrases used for subject headings are those in common usage; wherever practicable, they agree with terminology employed by authorities in the various subject fields. Most subject headings conform to one of three general types: those defining unitary concepts, as the names of specific diseases (TUBERCULOSIS), organs (KIDNEYS), and chemical substances (LYSINE); those defining manifold concepts, as the names of organ-localized disease processes (TUBERCULOSIS, PULMONARY), physiological phenomena (BLOOD COAGULATION), surgical procedures (TEETH EXTRACTION); and those defining generic entities consisting of several related concepts (LIPOIDOSIS, RODENTS, ANTIHISTAMINICS). No limitation is placed upon the number of subject headings which may be utilized in indexing a single article.

Currency is a prime objective of this index. It is not uncommon, however, for actual publication of journals to lag months, and sometimes more than a year, behind the date of publication given on the issue. The receipt of foreign journals particularly is often delayed. Though journals are commonly indexed and published in chronological order, delay in receipt will postpone publication of later material only for a reasonable time. In such instances the Register of Articles carries notation of a gap in chronological sequence.
